

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

it was intended, that is, as a review outline for persons preparing to take examinations in elementary mathematics and mechanics.

The plan and style of this book suggest very forcibly some of the advantages and disadvantages of an examination system. Definiteness, conciseness and a certain degree of precision are encouraged but there is danger of stimulating over-use or mis-use of the memory, and discouraging breadth and originality of view and interest in larger problems that cannot be handled adequately within the space of an examination period.

BURT L. NEWKIRK.

PROBLEMS AND SOLUTIONS.

B. F. FINKEL, CHAIRMAN OF THE COMMITTEE.

PROBLEMS FOR SOLUTION.

SPECIAL NOTICE. In proposing problems and in preparing solutions, contributors will please follow the form established by the Monthly, as indicated on the following pages.

In particular, a solution should be preceded by the number of the problem, the name and address of the proposer, the statement of the problem, and the name and address of the solver.

The solution should then be given with careful attention to legibility, accuracy, brevity without obscurity, paragraphing and spacing, having in mind the form in which it will appear on the printed page.

Please use paper of letter size, write on one side only, leaving ample margins, put one solution only on a single sheet and include only such matter as is intended for publication.

Drawings must be made *clearly* and *accurately* and an extra copy furnished on a *separate sheet* ready for the engraver.

Unless these directions are observed by contributors, solutions must be entirely rewritten by the committee or else rejected.

Selections for this department are made two months in advance of publication.

Please send all solutions direct to the chairman of the committee.

MANAGING EDITOR.

ALGEBRA.

Solutions of 408, 409, 410, 411, 412, 413, 414, and 415 have been received. A solution of 406 is desired.

418. Proposed by CLIFFORD N. MILLS, Brookings, South Dakota.

Form the algebraic equation whose roots are $a_1=2$ cos $(2\pi/15)$, $a_2=2$ cos $(4\pi/15)$, $a_3=2$ cos $(8\pi/15)$, and $a_4=2$ cos $(14\pi/15)$.

419. Proposed by GEORGE A. OSBORN, Massachusetts Institute of Technology.

Show that

$$(1^5 + 2^5 + 3^5 + \dots + n^5 + 1^7 + 2^7 + 3^7 + \dots + n^7 = 2(1 + 2 + 3 + \dots + n)^4$$

GEOMETRY.

Solutions of 437, 438, 439, 440, 443 have been received. Solutions of 427, 430, 432 and 433 are desired.

447. Proposed by HORACE OLSON, Chicago Illinois.

Given the edge of a regular tetrahedron, find the radius of the circumscribed sphere.
